The world's first and only* 3-D Playing Cards!

Introduction

Our [3d magic playing cards](#) are high quality bridge size cards with an apparently uniform back side. When viewed properly however, each backside actually reveals the face value of each card to the viewer. There are no obvious markings on the deck. It has been tested by magicians as well as casino personnel who could not find any set pattern by which to identify the cards. We used a hidden 3D technology, also known as stereographic imaging to create this effect.

3-D images have become quite popular over the last few years in most countries around the world. The so called "Magic Eye" books (#1 best sellers in many countries including the US and Japan) have greatly contributed to making this concept familiar knowledge.

Though the trend for buying books and posters is fading there has been a strong demand for some practical uses and applications utilizing 3D technology. Our [3d magic playing cards](#) do just that. They provide many uses for young and old, from playing tricks on your friends while playing cards, to countless magic tricks; or you can just use them as regular playing cards.

* To our knowledge, these are the only 3-D Playing Cards in existence!
